Den uvorne unge

Egentlig er mennesket kun en lille uvorn unge på denne planet. Mennesket vil altid prøve at sætte sig selv i centrum, men sandheden er, at Homo Sapiens kun har eksisteret på Jorden i nogle hundrede tusinder år. Planeten Jorden blev dannet for fire til fem milliarder år siden. Homo Sapiens er de fremmede, de nytilkomne.

Jeg vurderer mennesket for uvorn, fordi menneskeheden ubetaenksomt og unødvendigt ødelægger de grundlæggende betingelser på den planet, som er vores eneste bosted i fremtiden.

Vi kalder os intelligente, men det er da rasende uintelligent at sætte sine egne livsbedingelser på spil. Vi ødelægger ikke kun for os selv, men også for de andre organismer, der – ofte før os – har udviklet sig til livet her på planeten.

Det er vanskeligt at forstå de processer, som har dannet de landskaber, vi i dag færdes i. Mange af os er ikke nysgerrige nok og ser ikke det enestående, vi er omgivet af. Når vi ikke ser det smukke, så er det jo også lettere at ødelægge det.

I Grønland kan vi fortsat opleve den urørte, uspolerede natur. Menneskets udfoldelser er fortsat begrænsede, og ødelæggelserne er derfor også begrænsede.

Noget af det mest signifikante træk i den grønlandske natur er de bare klipper. Det arktiske klima er barsk. Grænserne for, at plantearter kan leve her, er trukket skarpt op. Derfor ligger klipperne ofte bare hen. Helt synlige for det menneskelige øje. Måske kun dækket af laver hist og her.

Klipper og sten blev dannet af flydende masser, der pludselig størknede. Hver enkelt sten viser et øjeblik fanget som et fotografi i stenen. Det er urgammle sten. Stenene er siden skuret af vand og frost.

Den enkelte sten bærer os. Stenen ligger fast på den underliggende klippe. Et sted dernede flyder fortidens giftige dampe fortsat rundt.

Mennesket forsøger at klassificere alt. En geolog kan med sin lup eller med smag fastlægge, hvordan den enkelte bjergart er dannet og også hvornår. I denne billedserie vil jeg lade klipperne og bjergarterne tale for sig selv.

The brat

In fact, human beings are only a little brat, a young on this planet. Man will always try to put himself in the centre, but the truth is that Homo Sapiens has only existed on The Earth for some hundreds of thousands of years. Planet Earth was formed four to five billion years ago. Homo Sapiens are the strangers, the newcomers.

I judge man to be a brat because humanity is inconsiderately and unnecessarily destroying the basic conditions of the planet, which is our only place of settlement in the future.

We call ourselves intelligent, but it seems unintelligent to put our own living conditions at risk. We are destroying not only for ourselves, but also for the other organisms that – often before us – have evolved into life here on the planet.

It is difficult to understand the processes that have formed the landscapes, in which we today are living. Many of us are not curious enough and do not experience the unique surroundings. When we do not experience the beauty, it is also easier to destroy it.

In Greenland, we still can experience the untouched, unspoiled nature. The human

development remains limited and therefore the devastation also is limited.

Some of the most significant features of the Greenlandic nature are the bare rocks. The Arctic climate is harsh. The boundaries of plant species being able to live here have been sharply drawn up. Therefore, the rocks are completely visible to the human eye. Maybe here and there only covered by lichen.

Rocks and stones were formed by floating masses that suddenly solidified. Every single stone shows a moment captured as a photograph in the stone. It is ancient stones. Since, the stones have been eroded by water and frost.

The individual stone carries us. The stone is stuck on the underlying rock. Somewhere down there, the poisonous fumes of the past continue to flow.

Man tries to classify everything. A geologist can with his magnifying glass or taste map out, how the individual rock is formed and when. In this series of pictures, I will let the stones and the rock species speak for themselves.
