

The eternal winter

Above the mountains the white as a heavy cover forces the hidden landscape down. As an eternal winter the white stretches out against the infinite horizon, which in this moment is disappearing in the darkness of night.

The white mass powerful stretches into the surrounding areas. It spits out a constant flow of ice from the edge, and its cold breath can be felt far into the Land of Man.

The Land of Man or Kalaallit Nunaat, which is the official name of the country, today known as Greenland. The white hides most of Kalaallit Nunaat, but the great expanse of ice and snow remains almost untouched by the human beings.

This white nothingness has become a symbol of the struggle for life for our planet Earth. Has Man disrupted unknown balances and created disorder in the accounts of nature?

Will the white giant one day completely disappear? Or will it again gain strength and begin to spread to the sensitive environment in what we now call our home?

The Greenland Ice Sheet is our powerful neighbour. The white mass presents major challenges for the courageous Greenlandic people, who live on the edge of what seems to be an eternal winter.

West of Narsarsuaq, South Greenland, January 2016
